Product Launch

Advantech CE-BUILDER 2.0 – The shortest path to Windows CE.NET application

Advantech Co. Ltd., delivering hardware and software solutions that empower the e-world, has released our powerful new Advantech CE -Builder™ 2.0 program, a “total” Windows CE development solution designed to speed time-to-market response and ease development of our customers’ embedded CE-based projects. Aimed at assisting customers with pre-sales inquires, customization of CE OS solutions and after sales support and service, the CE-Builder program has the flexibility to support customers at any level of project complexity and development expertise. New Advantech AIMB-340 EmbeddedATX Form Factor Solution Brings Flexibility and Multimedia Power to Embedded Market

The [AIMB-340](#) Socket 478 EmbeddedATX is Advantech’s first SBC based on the EmbeddedATX form factor. EmbeddedATX is a low profile form factor specification for embedded applications such as DVR, Gaming, kiosks, Point Of Sale (POS), thin clients and other high performance, low-profile embedded products needing the most current processor technologies in a low cost solution. EmbeddedATX is backward compatible with ATX designs for the rear I/O panel to reduce risk and preserve existing investments. It has the same dimensions and mounting hole locations as the microATX form factor as well. PCI expansion is available via the PCI riser and the board supports both ATX and SFX power supplies.
